

NO.EM1(10)83/nd11x/1983

Dated: 15-9-93

C I R C U L A R No. 407

Subject: PROVIDING GAPS IN BETWEEN THE ADJACENT TILES LAID FOR COVERING CENTRAL VERGES AND FOOT PATHS/PAVEMENTS OF ROADS.

L.G. had received various representations pointing out that the local bodies, i.e. DDA, MCD and NDMC etc., were covering the central verges and foot paths of the roads under their jurisdiction by laying tiles abutting one another without leaving any gaps in between. The laying of tiles in this manner results in preventing seepage of rain water in the sub-soil below which increases the surface run off.

L.G. has, therefore, directed that the adjacent tiles on all the central verges, and wherever possible on pavements and foot paths, should be laid leaving some gap, where grass could grow through which water could seep into the sub-soil. This shall also result in the reduction of tiles per unit area, thereby achieving savings in the construction of central verges, pavements and foot paths.

These instructions may be followed in Delhi Development Authority.
