CIRCULAR No. 255

Ensuring quality of water supply for drinking purposes is not only an important function of engineers but is essential because it is connected with the health of the people. Detailed instructions were given vide Circular No.231 and subsequent circular No. 232, dt. 21st July, 1988 and 29th July, 1988 respectively.

In these circulars, this matter was emphasised and re-emphasised in many words laying down various procedures and directions. This was also discussed in a meeting of SEs at one stage. Inspite of this, it is seen that adequate attention is not being given for this purpose and only occasional attention is being given to this.

The E.E.s should take this as one of the most important functions to identify the places (where water is being pumped by us to various destinations). The clearing of the tanks and testing of water should be made a highly important function and the EEs should watch them as of special and critical importance. They should maintain the register themselves to watch information about regular testing as mentioned in the above-circulars.

S.I.s also will be ~~required~~ periodically check up the details.
