

DEPARTMENT OF DEVELOPMENT AUTHORITY

No: B.1(10)/83/8409

Dated: 15/7/87

CONSULTANT NO. 209

It has come to knowledge that the department officials from site issue indents for cement to contractors without verifying the quantity available at site. It is also seen that when the bills are passed in the divisional offices, the divisional accountants do not insist on a certificate about the quantity of cement lying at site and verified physically and in many cases such certificate are avoided by the field staff. Here after, Executive Engineer signing the indents should please verify the W.S accounts of cement and they should sign the indents only if the quantity of cement lying at site cannot last more than 7 days.

Superintending Engineers should make it a point to invariably verify the stock position of cement whenever ^{they} visit the site.
