DELHI DEVELOPMENT AUTHORITY

No. EM/1(10)83/

Dt., the 24th Dec., 1986.

Circular No 181

Sub: Basic precautions on construction sites.

A copy of IG's U.O. No. 486/IG/86/3814 dated 18.12.1986 with a copy of earlier note of L.G. dated 25.9.1986 is enclosed for information and strict compliance by all the officers. It is necessary to see that these instructions are circulated upto the level of AE and JE etc. to ensure their implementation without any failure.

I have seen at certain sites where widening work of roads is almost complete, some electric poles are still standing almost at the centre of the roads. It is very necessary that precautions are taken by the field staff to provide necessary precautionary signs wide enough and bold enough to attract the attention of drivers even at night. No scope should be left for any untoward accident. These instructions are circulated for information of all the engineers in DDA for strict compliance.
